Dear Sirs,

Re: MICROBIOLOGICAL TEST OF BASIL SEEDS

Hereby, please find results of 3 Basil seed samples brought to our laboratory on May 24, 2012.

Transportation: The seed samples were accepted in the laboratory without any means of protection from temperature changes.

600 seeds were tested for *Peronospora* sp. contamination by the Blotter test method.

The test was performed according to:
S.O.P 83: "Detection of Fungi in seeds".

RESULTS:

Lab ID	Sample	Variety	Lot	<i>Peronospora</i> sp.
1786	Basil seeds	Basil Sweet Aroma 2 F1 (ARO) 2120113	9976K	Negative
1787	Basil seeds	Basil Super Sweet Ashalim 2120106	9517	Negative
1788	Basil seeds	Basil Sweet Nufar (ARO) 2120103	10023	Negative

The data in this certificate reflect results that are valid for analyzed sample only.

End of certificate

Sincerely yours,
Isaac Assouline
Head, Microlab Laboratories (99) LTD.
